How to use Vigor2750 as a pure VDSL modem?

Vigor2750 can act as a pure VDSL modem for PC or Router to access Internet with public IP given by ISP directly. You can set by following the steps listed below:

1. Log in web configurator of Vigor2750 and open **VDSL>>VDSL Setup**.

Vigor2750 Se High Speed VDSL2 Rou														D	rc	ıy	Tek	(0
Auto Logout 💌	VDSL Setup																	
Quick Start Wizard Online Status	VDSL Setup Modem Settings																	
VDSL Status VDSL Status VDSL Setup	Operation Role Operation Mode			Client(CPE Site) V Bridge Mode V														
	Handshake Settings VDSL2 Profile	V	8a	I	8b		8c	-	8d		12a	V	12b	>	17a	V	30a	
 Firewall CSM Bandwidth Management Applications VPN and Remote Access USB Application VolP IPv6 User System Maintenance Diagnostics 	G.hs Carrier Set	۲	Auto	0	A43		в43 ок	~	V43									
Support Area Application Note FAQ Product Registration																		

- 2. In the field of **Operation Role**, choose **Client** (**CPE Site**).
- 3. In the field of **Operation Mode**, choose **Bridge Mode**.
- 4. Click **OK.** Later Vigor router will reboot.

Note: When you enable **Bridge Mode** function in Vigor 2750, the DHCP Server will be disabled and other functions such as **Firewall** or **VPN** cannot be used in this mode either.

After finishing the above configuration, the PC or router behind Vigor2750 can dial up PPPoE (see Figure 1) or obtain an assigned IP from ISP (see Figure 2) directly.
